My task was to create an application for smarthome simulation using design patterns

6. MICROSERVICES APP

The karbyshevhelp application is an implementation of a system for tracking orders and their status.

Work History

2021-09 - Current

Backend Developer

CTU FEE, Prague

- Built APIs and data clients to consume APIs.
- Integrated third-party APIs from external applications into web platforms.
- Troubleshoot and tested software and debugged to clean up code and improve efficiency.
- Integrated front-end elements into applications.
- Wrote unit tests to evaluate high code coverage.

The school projects I worked on were mostly team projects, I was part of that team. My responsibilities were writing the backend, be it services, model or tests
